Field of the Invention This invention relates to container closures, and more specifically to a resealable container closure which is secured to the container by various types of neck-sealing devices. 2. Description of the Prior Art

---

Various attempts have been made in the past to develop resealable containers, but as the market for resealable containers has expanded, even these attempts have not proved commercially successful. For example, U.S. Pat. No. 4,617,995, which issued to Terrel on Oct. 14, 1986, shows a container closure which is screwed onto the threaded neck of a container by conventional means. The container closure in this patent, however, provides for a single layer of pressure sensitive adhesive. Another prior art patent showing a single layer pressure sensitive adhesive on the inner side of the closure is U.S. Pat. No. 4,540,056, which issued to Murray on Sep. 10, 1985. This patent discloses a cover portion of a container having a pressure sensitive adhesive layer applied to the inside surface of the cover, and a removable liner adhered to the pressure sensitive adhesive layer. This liner is removable by hand or by a mechanical apparatus to permit easy opening of the container. Another prior art patent disclosing a resealable closure is U.S. Pat. No. 4,556,206, which issued to 82157476af
